

Dresser couplings were subjected to a 30 minute fire test at 800°C (1472°F), in accordance with ABS Rules and meet ISO 19921 and ISO 19922 requirements

Dresser Granted Fire Rated Approval from American Bureau of Shipping

Dresser Piping Specialties has been granted ABS Type Approval for fire rated couplings that meet or exceed the previous 2008 ABS rule changes. Typical applications for the ABS approved Dresser® coupling include above deck inert gas lines, cargo oil lines, bilge systems, fuel oil transfers, and lube oil transfer systems. Each authentic Dresser approved coupling can be qualified to a working pressure of 19.2 bar (275 PSI). Fire testing has been successfully conducted to the stringent guidelines of ISO 19921 & 19922 requirements.

Dresser Piping Specialties has over 125 years experience manufacturing quality piping products and began supplying

ABS approved couplings worldwide in 1942. Dresser couplings are widely used for marine piping systems for their ability to absorb vibration, expansion and contraction while providing leakproof dependability. To prevent potential environmental incidents and help protect your FPSO investment, insist on using only authentic Dresser couplings for the quality and assurance you demand.

For further information and coupling size specifications please contact your Dresser Sales Representative, or call Dresser Piping Specialties Export Market at 814-362-9200.
