

For Immediate Release to Oil, Gas & Petrochem Equipment, October 2009

Turnkey Solutions for Prefabricated Measurement & Regulations Stations

Dresser, Inc., with an office and manufacturing plant located in the heart of the Marcellus Shale in Northwestern Pennsylvania, offers the best solution to the design and manufacture of measurement and regulation gate stations for gas distribution and transmission systems through Dresser® FloSystems™ prefabricated sets.

Whether upstream or downstream, Dresser's unique manufacturing capabilities and engineering expertise provide truly "cost-effective" modular station sets while significantly reducing installation costs, material costs and eliminating labor costs associated with field welding, pipe cutting, beveling, threading, coating and testing. All Dresser FloSystems stations are custom-built to customer specifications and manufactured by our API-1104 and ASME Section IX certified welders. Flange fittings, tubing, valves, meters and regulators are all-inclusive and CAD drawings provided for customer approval. In addition, Dresser engineers use 3-D computer modeling and analysis software permitting the customer to review their entire station design for potential component interference, clearance and misalignment issues prior to manufacturing. From concept to delivery, the Dresser engineering team partners with you through all aspects of the project with on-site visits and consultations during various stages of the manufacturing process. To ensure a trouble free installation, complete radiographic and hydrostatic testing is performed at the factory prior to shipment.

Keeping your gate station system operating at peak performance is crucial not only to your success, but for safety and regulatory compliance. That's why Dresser's aftermarket service stands behind each and every station we manufacture to ensure continuous product quality and business support. Experienced technicians and representatives provide fast, attentive service, and full-scale project implementation and documentation. Many satisfied customers have recognized operational savings through reductions in administrative costs, decreased component inventories required to support field construction, and reduction of field start up costs. But most importantly, the extreme satisfaction realized by streamlining their projects to a single-source supplier for all their measurement & regulation gate station needs.

Let Dresser's proven experience and expertise go to work for you! Dresser, Inc. 41 Fisher Avenue, Bradford, Pennsylvania 16701, 814-362-9200. Fax 814-362-9333. www.dresser.com/pipingspecialties.com
