**FOR IMMEDIATE RELEASE**

**New Dresser® Texsteam® HiCIP™ Solar Powered  
Chemical Injection Pump Delivers 44% More Volume per Head.**

HOUSTON, USA -- Dresser introduces the high volume, high pressure Texsteam HiCIP solar powered chemical injection pump. Driven by a high output motor, the HiCIP pump delivers 44% more volume per head than the standard iCIP® pump. The HiCIP pump does the work of 2 – 3 lower volume pumps thereby reducing the cost of ownership. With only one pump running, maintenance expenses are also reduced.

Built from the Texsteam iCIP platform, the HiCIP pump comes with similar features: variable speed continuous duty brushless motor for even dispersion of chemicals and quiet operations, microprocessor-based programmable controller, modular design for selectable levels of performance and fault management. The HiCIP carries CSA and UL certifications and features a 24 month system warranty.

Texsteam Solar Powered Pump Solutions are environmentally friendly solar solutions. This solar powered pump is ideal for remote applications where a self-contained power source is key and environmental issues are paramount.

“The Dresser Texsteam HiCIP Pump can deliver over 250 quarts per day,” said Charlie Parker, Dresser Texsteam Pump Sales Manager. “Our customers demanding high volume and high pressure will find that this product meets or exceeds their requirements.”
